

# User Story Template

## Summary

*Concise and descriptive statement of functionality. Anyone on the program should be able to read this and know immediately what the story is about.*

## Epic

*Link to an epic that states the wider context for the story.*

## Description

### Who, What and Why scenario

*As a ... (user of the system/persona)*

*I want ... (feature or problem to solve)*

*so that ... (benefit of story being completed)*

## Acceptance Criteria

*States the Acceptance Criteria of the user story. Guidance is to go for Given-When-Then (GWT) format where*

*Given is the pre-condition*

*When is the user action*

*Then is the result*

*When these criteria are met, the story can be verified. PM / BA uses these criteria to accept the story. The criteria are also used to demo the story once accepted.*

*Labels / messages to show on UI are provided if needed. Please provide both English and localized versions (e.g. ja\_JP) of labels / messages.*

## UI Design and other design elements

*States the UI Design / Mock UI if there is change in UI.*

*Business flows and rules as appropriate*

## Performance Criteria

*States the performance criteria if any.*

*These can include interactive performance, throughput characteristics, scalability etc.*

## Dependencies

*Any dependencies identified and mentioned/referenced to the user stories.*

## NFRs

*Applicable NFRs - for example additional security conditions (e.g. highlight PII needs), user experience - should be added to acceptance criteria.*

*Add any notes to explain why specific NFRs may have not been included for this story, where this is not obvious.*

*If there are no NFRs to consider for this story, add this line: "No NFRs considered for this story"*
